

Testing of DimiCare Materials Completed

The DimiCare project has reached another significant milestone. **The piloting phase has been successfully completed.** Over **80 care workers (in training)** and more than **20 healthcare educators** participated in testing the DimiCare training course and the DimiCare microlearning units for relevance, usability, and design. Their feedback has been collected and is currently being analysed to identify areas for improvement. The materials will be refined and the **final version will be available on the DimiCare website by the end of October 2024.**

DimiCare Video

Curious about what the participants of the pilot have to say? We have created **a short and exciting video based on their experiences.** Participants from Italy, Austria, and the Netherlands share their impressions of the DimiCare training. **You can access the video on the project website and on [LinkedIn](#).**

New article published

A **new article has been published on EPALE**, the platform for adult education in Europe. It discusses the **DimiCare microlearning units**, which are small multimedia online resources that complement the DimiCare training course. To learn more about the purpose and objectives of the DimiCare microlearning units, **read the article here.** It is available in English and all four partner languages: German, Italian, Danish, and Dutch.

Upcoming events

In the last months of the project, **the partnership is organising national events in all partner countries** to present the project and its final results.

In **Austria**, the project will be presented alongside other initiatives during the Erasmus+ days on **17 October 2024 in Vienna.** Stay tuned for more information.
